

PROSAR-AIDA *for Payables*

Advantages of automation

- Savings in time and labor costs
- Reduced error rates
- More efficient flow of information
- Higher productivity
- Competitive Advantage

Minimizing high-cost workflow processes provides both tangible and intangible benefits. Automation using Paradatec's technology products, is the proven way to providing your organization with a strong competitive advantage.

Paradatec's PROSAR-AIDA is a high-speed, full text OCR application that reads hundreds of thousands of your invoice layouts from top to bottom and extracts the necessary data in an automated way for indexing or transfer to a business system.

Accounts Payable Processing as a Competitive Advantage

Accounts Payable Automation means faster and more accurate paper invoice processing, using less labor. Accounts Payable Automation will give your organization better control over your accounting process which is a key requirement of legislation such as the Sarbanes-Oxley Act.

In summary, it makes your processes faster and less expensive. Thus, your Payables operation becomes a true advantage in today's competitive environment.

Why Automate Invoice Preparation and Data Capture?

Sorting, data entry, and filing supplier invoices are laborious but necessary. Accuracy is required. Performing these tasks manually ties down highly qualified staff with routine, labor-intensive tasks.

No matter how conscientious your staff is, mistakes do happen. The time and cost it takes to trace and correct an error depends on how far along in the process the error has gone.

PROSAR-AIDA for Payables

provides a unique solution for companies that wish to reduce the manual labor and increase the accuracy associated with sorting, reviewing, keying, paying, managing and filing invoice documents.

PROSAR-AIDA allows you to:

- Avoid manual sorting of documents
- Eliminate separator sheet insertion between invoices at scan time
- Automatically process your mix of tens of thousands of vendor invoices
- Process invoice layouts that change over time (since we discover data "on-the-fly")
- Extract an unlimited number of data fields such as: PO number, Invoice Date, Invoice number, invoice Total, Tax Amounts, Vendor, Shipping costs, and specific line item detail.
- Automatically extract data needed to determine the appropriate approval routing
- Automatically extract line item detail
- Automatically identify your GL code for every line item
- Match line items to a P.O. database (2-way match)
- Interface with your financial system e.g. Oracle, SAP, JD Edwards, Lawson ...

PROSAR-AIDA *for Payables*

Company Profile

For two decades, Paradatec has focused its skills towards delivering the most efficient, accurate, and flexible freeform document classification and data extraction solution available anywhere.

Our unique approach leverages our proprietary high performance pattern recognition technology. As the "grandparents" of this market niche, our experience has allowed us to create a proven, stable, reliable, and scalable software solution.

Automated Capture with PROSAR-AIDA

PROSAR-AIDA is text recognition and analysis software which can determine document types, classify images, and capture or extract data for routing and archival. The process begins with a high-speed and efficient full-page OCR scan of each image. This first step allows PROSAR-AIDA to search each and every word of every document and discover the content much as a human being would. This overall process of discovery is unique, and makes PROSAR-AIDA very different from other solutions in the Accounts Payable space. A flexible payables solution requires

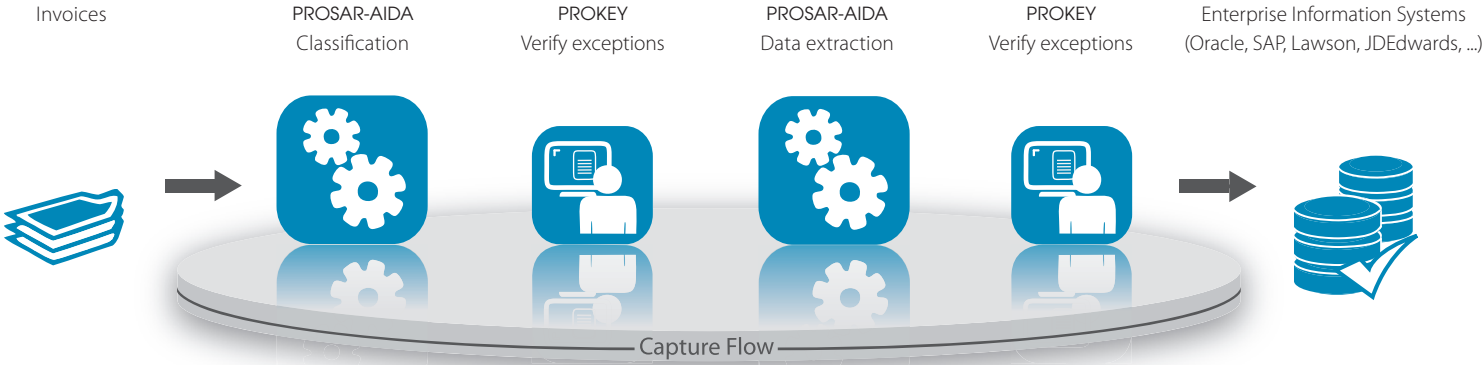

PROSAR-AIDA's unique ability to process an unlimited number of versions and formats of particular document types. This capability is unique to PROSAR-AIDA and a vital feature for creating a true and effective unstructured document classification and data capture solution.

Competing solutions require complex scripting to configure and manage. PROSAR-AIDA is configured through a purely graphical interface so those most qualified to work with it are the people who understand the incoming paper.

PROSAR-AIDA is often brought in when other products have failed to work.

At Paradatec, we offer superlative automation with exceptional quality.

Call today for a demonstration and see first-hand, the difference we can make.

Capture Flow

As part of the overall automated process, a "platform" from which to drive capture sub-processes is used. This capture work flow "platform" can be provided as part of the Paradatec overall capture solution. In the case that a scanning process is already currently in place, the Paradatec software components have been built to seamlessly integrate with some of the largest and most popular Scanning and Capture Workflow products on the market today.
